

**PROCESSING RECOMMENDATIONS**

**PREPARATION...** Store and use Body Double™ at room temperature (73°F / 23°C). Warmer temperatures will drastically reduce working time and cure time. Storing material at warmer temperatures will also reduce the usable shelf life of unused material. This product has a limited shelf life and should be used as soon as possible. Wear safety glasses, long sleeves and rubber gloves to minimize contamination risk. Mixing sticks should be flat and stiff with defined edges for scraping the sides and bottom of your mixing container.

**Safety -** We recommend that you do a small scale test on the back of your hand to ensure that you have no allergic reaction to the release preparations or mold rubber. If you notice any type of skin reaction, do not use this product. Body Double™ is safe for skin application only – it should not be ingested. Do not use to make molds of the inside of the mouth. You can make molds of a smile - parted lips with teeth exposed, but closed together.

Life casting is best done with at least three people. You will be working with materials that set up quickly. One person is the designated model and the others will mix and apply mold rubber and support shell.

**Avoid Open Eye Contact -** In making a mold of the face, applying this silicone to closed eyes (after applying Body Double™ release cream to avoid encapsulating eye lashes) is common practice. At no time should this or any other Smooth-On material come in contact with open eyes.

**Cure Inhibition -** Contaminants on the skin will cause inhibition. Prior to applying Body Double™ Release Cream, skin should be clean and free of make-up, cosmetics, skin creams, oils perfumes, etc. Do not apply rubber over skin coated with an aloe-based product, as this will cause cure inhibition. Do not use latex gloves. If using a bald cap, make sure it is latex free.

Because no two applications are quite the same, a small test application to determine suitability for your project is recommended if performance of this material is in question.

**RELEASING BODY DOUBLE™...** Body Double™ will not stick to skin but it will “mechanically lock” onto skin hair including facial hair, eyebrows, eyelashes etc. Body Double™ Release Cream or HYPER-FOLIC™ release additive (see below) will minimize mechanical lock. Also, you can shave the intended molding area prior to applying Body Double™.
The Material Safety Data Sheet (MSDS) for this or any Smooth-On product should be read prior to use and is available upon request from Smooth-On. All Smooth-On products are safe to use if directions are read and followed carefully.

**BE CAREFUL** - Use only with adequate ventilation. Contact with skin and eyes may cause irritation. Flush eyes with soap and water for 15 minutes and seek immediate medical attention. Remove from skin with waterless hand cleaner followed by soap and water.

**IMPORTANT** - The information contained in this bulletin is considered accurate. However, no warranty is expressed or implied regarding the accuracy of the data, the results to be obtained from the use thereof, or that any such use will not infringe upon a patent. User shall determine the suitability of the product for the intended application and assume all risk and liability whatsoever in connection therewith.

**MEASURING & MIXING...**

**Body Double™ “Fast Set”** is best dispensed through its pre-measured 400 ml cartridge tube system with static mixing tube (1/2” – 18 elements). Cartridge dispensing guns and static mixing tubes are available from Smooth-On distributors. On cartridge tube set (A+B), remove clear cap from cartridge end and Twist / break off end-cap. Screw on static mixing tube and place cartridge in dispensing gun.

Do not squeeze trigger until you are ready to apply rubber. After squeezing trigger, Parts A & B will quickly be mixed through the static mixing tube and dispensed through the tip in a uniform color. Dispense directly onto skin and immediately spread mixture over all surfaces to be molded using a soft bristle brush.

**Note:** If you stop dispensing, product may cure in static mixing tube. If this happens, replace static mixing tube.

**Storage Of Unused Material** – Leave static mixing tube with cured material attached to cartridge. To use again, simply replace static mixing tube.

**APPLYING A SUPPORT SHELL, DEMOLDING & CASTING...**

**Gypsona™ Plaster Bandages** (available from Smooth-On) remain the industry standard for making a fast, strong support shell. After Body Double™ rubber has cured, brush a thin layer of petroleum jelly onto rubber mold surface to minimize chances of suction or mechanical locking of rigid support shell. Wet and apply bandages over rubber mold surface, following contours. Bandages dry in 15 minutes and can be removed from rubber surface.

**Demold Rubber From Body** - Slowly peel rubber away from skin surface. If you encounter encapsulated hair that is stuck (did not get enough release agent), you may have to slowly cut the hair with scissors. Be careful not to cut your skin or the mold rubber.

**Removing Body Double™ Release Cream** – Make-Up Remover will work well. Apply to skin and then wash area with soap and water. Baby oil will also work, but may leave a residue on the skin.

**Casting** - Seat rubber mold into support shell before casting. A release agent is not necessary when casting most materials. If casting another platinum-cure silicone rubber, use Ease Release™ 200. If casting resins, let rubber cure at least 60 minutes before casting. Store cured Body Double™ rubber mold in support shell for best results.
